

Sign up page :

- ☐ ~~When a user selects a language in the app, the corresponding country code does not update or match the selected language.~~

- ☒ After the user fills in their personal information, the app redirects them back to the OTP verification page, causing a new OTP to be sent unnecessarily.

- ☐ ~~Currently, the placeholders for address and city are incorrectly ordered. The address field should appear first, followed by the city field.~~

- ☐ Sometimes, the language displayed on the User Information page does not match the language selected during the startup process. For example, even after choosing Norwegian at startup, a different language may appear on the User Information page.

Date of birth

Nov 19, 1992

Country

Norge

City

Enter your city

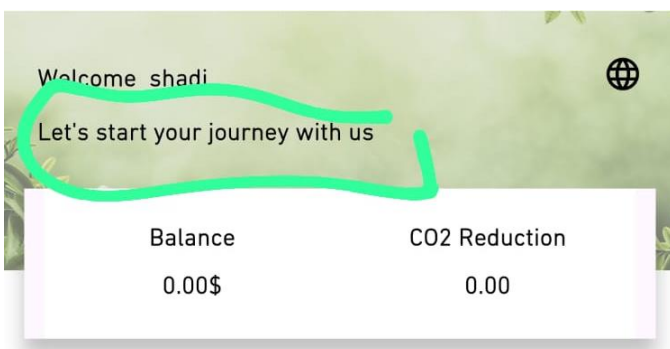

Address

Enter your address

- ☐ After completing the user information form and entering the Home page, pressing the "Return" or "Back" button takes the user back to the User Information page, instead of staying on the Home page or exiting the app.

Home page:

- ☐ Remove this title or replace it with appropriate title.

~~☐ There are several issues related to user IDs. Sometimes, after logging in, users see a different name or user information that does not belong to them.~~

? **Note for Ads Section (Advanced Modifying):**

In the ads section, we need to improve the system by displaying ads based on user behavior. Specifically, ads should relate to the types of rubbish the user typically disposes of.

This targeting will be based on the **detection results** recorded in **Firestore**.

We will discuss the details and implementation of this behavior-based ads feature at a later time.

~~☐ In the video section, the video should not be allowed to close before it finishes. The user must be forced to watch the entire video. Additionally, once the user finishes watching the full video, the system should automatically remove any error value caused by an invalid process.~~

✗ "2": which indicates the user should close the door and the process should end immediately.

The system must handle these responses properly even during the waiting period.

✗ You can handle the basic (non-detailed) detection results and include them in the process results.

This will simplify the initial processing without needing full detailed detection at this stage.

Statistics page:

- ☐ ~~This page layout will be completely changed.~~
~~The new design can be found at the following link:~~
~~[New Layout on Figma](#)~~

Please feel free to contact me if you have any questions regarding anything on this page.

Map page:

✗ Feature Request: Path to Bins with Distance Sorting

We need to create a path between the user's current location and nearby bins.

Additionally, display a list of bins sorted by the shortest distance.

When the user clicks on a bin from the list, the app should show the path from the user's location to the selected bin.

Settings page:

- ☐ ~~Sometimes, when opening the User Information page, the placeholder text inside the input fields appears empty.~~
- ☐ ~~When selecting the "Delete Account" option, the app only logs the user out instead of actually deleting the account from the system.~~

There are additional modifications and features that need to be enabled or adjusted.

We will discuss and review these items together before implementation.
